Automotive Wave Keys

A special electronically coded key (wave key) prevents the car from being started-even if a mechanical duplicate of the key is used. A transponder, built into the key, signals the immobilizer control unit that the key is genuine. If the car is hot-wired, or an unauthorized key is used, the engine will not start.

Wave key- no more key insertion, no more key twisting left to right to open or close car door even starting, no more pressing the key button to lock or unlock or even alarming the car, all u gonna do just WAVE IT to the car, wait and see then for sure nothing will happen.....

Honda Wave Key - Tsikot Forums

The smart key uses radio waves to "talk" to the matching vehicle containing embedded antennas that identify and confirm its presence. On some models, like newer BMWs (Comfort Access), when the key comes within 1.5 metres of the driver's car, the door automatically locks or unlocks with a touch of the door handle.
