Air in the brake line(s) Air in the brake line(s) is the most common cause of a soft/spongy brake pedal. If air gets into the brake lines, it can prevent brake fluid from flowing properly, causing the brake pedal to feel spongy or soft. If the brakes are soft or spongy, this is a good time to change or flush the brake fluid.

Causes of Spongy Brakes | Wagner Brake

Brake rotors come in a few different varieties. Most are discs with flush surfaces. There are also drilled and slotted rotors. Putting holes in any brake components may seem counterintuitive, but the holes allow water and heat to escape from between the pads and rotors, preventing brake fade and boosting stopping power.
