international guidelines for the management of Diabetic Ketoacidosis (DKA) in both adults and children 1-6. In the last decade, however, there has been a change in the way patients with DKA present clinically and in addition there has been rapid development of near-patient testing technology. Until recently there was no easily available assay

Joint British Diabetes Societies Inpatient Care Group

Diabetic ketoacidosis (DKA) is a serious condition that can lead to diabetic coma (passing out for a long time) or even death. When your cells don't get the glucose they need for energy, your body begins to burn fat for energy, which produces ketones. Ketones are chemicals that the body creates when it breaks down fat to use for energy.
