Java provides the `java.net.HttpURLConnection` utility that can be used to establish a non-secure HTTP 1.1 connection. However, the API was considered difficult to maintain and further extended with the support for HTTP 2.0 and, so, an entirely new client API was introduced in order to establish a connection via the HTTP 2.0 or the web

BookValidator2 Java Source Code

Once you write a Java program you need to compile it using the javac command, this shows you the compile time errors occurred (if any). Once you resolve them and compile your program success fully, an executable file with the same name as your class name is generated in your current folder, with the .class extension..
