LAN: Local Area Network A LAN connects network devices over a relatively short distance. A networked office building, school, or home usually contains a single LAN, though sometimes one building contains a few small LANs (perhaps one per room), and occasionally a LAN spans a group of nearby buildings.

LANs, WANs, and Other Area Networks Explained

A system of LANs connected in this way is called a wide-area network (WAN). The difference between a LAN and WAN is that the wide-area network spans a relatively large geographical area. Typically, a WAN consists of two or more local-area networks (LANs) and are often connected through public networks. Nodes on a LAN

What is LAN? Local-Area Network - Webopedia Definition

A local area network (LAN) is a collection of devices connected together in one physical location, such as a building, office, or home. A LAN can be small or large, ranging from a home network with one user to an enterprise network with thousands of users and devices in an office or school. Regardless of size, a LAN's single defining characteristic is that it connects devices that are in a single, limited area.

LAN, MAN, and WAN are the most common types of computer networks which have their own significance in different fields. All the three types of networking systems are compared in detail with their Pros and Cons. LAN, MAN, and WAN are the most common types of computer networks which have their own significance in different fields.

LAN Vs WAN Vs MAN: Exact Difference Between Types Of Network

LANs are typically confined within a small area—usually one building, but that's not a firm requirement. That area might be your home or small business, and it could contain just a few devices. It might also be a much larger area, like an entire office building that contains hundreds or thousands of devices.

What Is A Local Area Network (LAN)? - How-To Geek

A local area network (LAN) is a computer network that interconnects computers within a limited area such as a residence, school, laboratory, university campus or office building. By contrast, a wide area network (WAN) not only covers a larger geographic distance, but also generally involves leased telecommunication circuits.
