Introduction In petrol vehicles carburetor is used for supplying air fuel mixture to the cylinder In response to the recent demand for cleaner exhaust emission improved drivability and mileage carburetor is not sufficient In place of the carburetor MPFI system is used in vehicles MPFI system is injects fuel into individual cylinders based on commands from engine control module The MPFI gives higher output, faster throttle response under varying driving conditions

MPFI • Multiport fuel injection injects fuel into the intake ports just upstream of each cylinder's intake valve. • In this system each cylinder has number of injectors to supply or spray fuel in the cylinders intake manifold space • MPFI system injects fuel into individual cylinders, based on commands from the 'on board engine management system computer' - popularly known as the Engine Control Unit(ECU).

Multipoint Fuel Injection System (MPFI)
Engine performance viz. power output, economy, etc. is greatly affected by the fuel injection system The injection system has to perform the most important duty of initiating and controlling the engine during the idling, cruising or during the full load so that the equivalence ratio is maintained according to the need of operation.

The working of MPFI engine is somewhat similar to the carburetor engine, each cylinder is treated individually. An input is fed to the computerized system in order to calculate the amount of air and fuel is to be mixed and send to the combustion chamber.

Multipoint Fuel Injection System
Multi point fuel injection (MPFI) is a technique of fuel injection in petrol (or gasoline) engines. Note: Petrol (or gasoline) engines are sometimes also known as spark ignition (SI) engine. In general, a petrol engine uses carburetor to mix air and fuel but it has poor response acceleration and deceleration.

Multi Point Fuel Injection (MPFI) System | Types ...
The MPFI engine is abbreviated as the Multi point fuel injection engine. The MPFI engine got this name because of the reason that each cylinder is having a fuel injector installed near them. That is why they are called as the Multi point fuel injection engine. Principle behind MPFI The power is produced in a petrol engine is by burning the fuel.

MPFI or Multipoint Fuel Injection can be considered as the analog of CDRI in petrol engines. It is different from CRDI in the sense of the amount of pressure used and the fact that it's used for petrol (gasoline engines.) Before MPFI system was invented, Carburetorators (purely mechanical engines) were used.
