Perhaps a mixture containing magnets and rocks? Be creative and think like a scientist. I hope you enjoyed this simple experiment and learned a little bit about mixtures. If you have more questions about this, or need tips about science fair ideas around this topic (or others), contact the author.

Simple Science Experiments: Separating Mixtures ...

Homogeneous mixtures have a uniform composition and phase throughout their volume, while heterogeneous mixtures do not appear uniform and may consist of different phases (e.g., liquid and gas). Examples of types of mixtures defined by particle size include colloids, solutions, and suspensions.

What is the difference between a solution and a mixture? In chemistry a solution is actually a type of mixture. A solution is a mixture that is the same or uniform throughout. Think of the example of salt water. This is also called a "homogenous mixture." A mixture that is not a solution is not uniform throughout. Think of the example of sand in water.

Mixture and Solution Quiz - Interactive worksheet

Before we dive into solutions, let's separate solutions from other types of mixtures. Solutions are groups of molecules that are mixed and evenly distributed in a system. Scientists say that solutions are homogenous systems. Everything in a solution is evenly spread out and thoroughly mixed. Heterogeneous

mixtures have a little more of one thing (higher concentration) in one part of the system when compared to another.

Chem4Kids.com: Matter: Solutions

Like a mixture, solutions can be separated into its original components. However, unlike mixtures, solutions can be separated by evaporation. For example: the water and salt solution will evaporate as the solution is heated. The water will change from liquid to gas as the water-salt solution begins to boil, leaving only the salt behind.
