Standard Website Resolution Size

There's no one best screen size to design for. Websites should transform responsively and fast at all screen resolutions on different browsers and platforms. Accessible. Mobile-friendly. Design for your audience, first. Design from 360×640 through 1920×1080. Design for desktop displays from 1024×768 through 1920×1080.

What Are The Best Screen Sizes For Responsive Web Design?

Most websites range from 720 to 1,000 pixels wide. If a website visitor has his monitor set up to 800 pixels or more and the page is wider than 720 pixels, he will have to scroll the screen to the right in order to show all of the information. Forcing a visitor to scroll either left or right reduces the likelihood that he will continue to use your website.

What is the Web Design Standard Page Size? | Techwalla

There's no standard resolution for web design that is best for all cases since websites need to consider how their audience is using the site and what their design concept is. But to give you a quick answer, the most common design file resolution used by the digital agencies that we work with is 1440px wide, with the main content container that is 1140px.

Recommended Screen Resolution for Web Design

For full-width slideshows (that automatically stretch to the full size of the browser), I recommend going for 2560 pixels in width, which is the standard resolution width for 27" and 30" monitors. Images can have any height you need, to create an aspect ratio you're comfortable with.
