will be noticed as the drawing proceeds, most likely when more of it is drawn in, and also through flicking.

The process of triangulation helps you to keep the big-look in mind while you are drawing. This is because it relies on comparing two parts of the image to find a third.

Triangulation is simply a method of dividing a surface into a number of triangles and transferring them to the development. To find the development of an oblique cone by triangulation, divide the base of the cone in the top view into any number of equal parts and draw an element at each division point, as shown in Figure 8.34.
